our sister company...**

Magpie
BMS SERVICES LTD

Building Management Systems |
Control Panels | Automation

Bexley Leisure Centres | Sidcup, Erith and Crook Log

Magpie BMS Services Ltd recently completed the replacement of level controls for swimming pool balance tanks. The previous control utilised conductive level probes which had deteriorated over time due to the chlorinated water. We designed a new control panel to monitor the level and control the fill valve for the tanks serving the Main and Teaching Pools.

The depth of water is measured using Submersible Level Transmitters, manufactured by Omnitron, as these are available for use with corrosive liquids. A *Trend IQ412 controller* was employed for each pool with a view to incorporating into the building network in the future.
